Notion Freelancer Starter Kit

Welcome

This starter kit shows a freelancer how to set up a small Notion workspace for clients, projects and invoices. Each chapter is one page you can finish in ten minutes.

1. Clients database

Create a database with these properties: Name, Email, Status (Lead, Active, Past), Next follow up (date), Notes. Add a board view grouped by Status.

2. Projects database

Properties: Project, Client (relation), Due date, Fee, Stage (Brief, Draft, Review, Done). Add a calendar view on Due date and a table view filtered to Stage is not Done.

3. Invoice tracker

Properties: Invoice number, Client (relation), Amount, Sent on, Paid on, Status. Use a formula property to flag invoices sent more than 14 days ago and not paid.

4. Weekly review

Every Friday: clear the Review stage, send follow ups to Leads, update paid invoices, and write three lines about what went well. Keep the template as a button.

5. Next steps

Duplicate the databases for a new client, share one page with them, and keep the rest private. Revisit the setup every quarter and delete what you do not use.
